Delaware River

scroll through to see why our waterways are so important and how to protect them

The Delaware River was voted River of the Year!

by AmericanRivers.org
Why should we care about the Delaware River?
It provides drinking water to 15 million people!
We also depend on this water for cleaning, bathing, laundry—any time you turn on your tap you are using water from the Delaware River.
River Ambassadors work hard throughout the summer to advocate for the river’s health and provide daily water testing to showcase how well our river is doing!
What can you do to protect our waterways? Watch your water consumption! Reduce, reuse, recycle! Clean up our streets! There are several things we can do as a community to protect our waterways.
